cHIE Alerts are an efficient way for you to keep track of a crucial aspect of your patients' health – hospital encounters. Through cHIE Alerts, you can receive notifications when your patients are admitted to or discharged from a hospital or emergency department, so you can follow up to help them recover faster and reduce their risk of readmission.

The cHIE Alerts system is simple. You tell us what patients you want to keep track of, and we send you notifications any time one of those patients visits a hospital or ED. You can receive alerts in real time or at set times of day that you choose. Alerts come to you through an SFTP connection or through cHIE Direct, UHIN's EHR-interoperable secure email system
